How, When

"If the rate of change on the outside exceeds the rate of change on the inside, the end is near."

- Jack Welch

"It is not the strongest of the species that survives, nor the most intelligent that survives. It is the one that is most adaptable to change."

- Charles Darwin

"We cannot solve our problems with the same thinking we used when we created them."

- Albert Einstein

 © Pragmatic EA Ltd (2008-2017)

(pre 20th Century)

The era of

Operations

(20th Century)

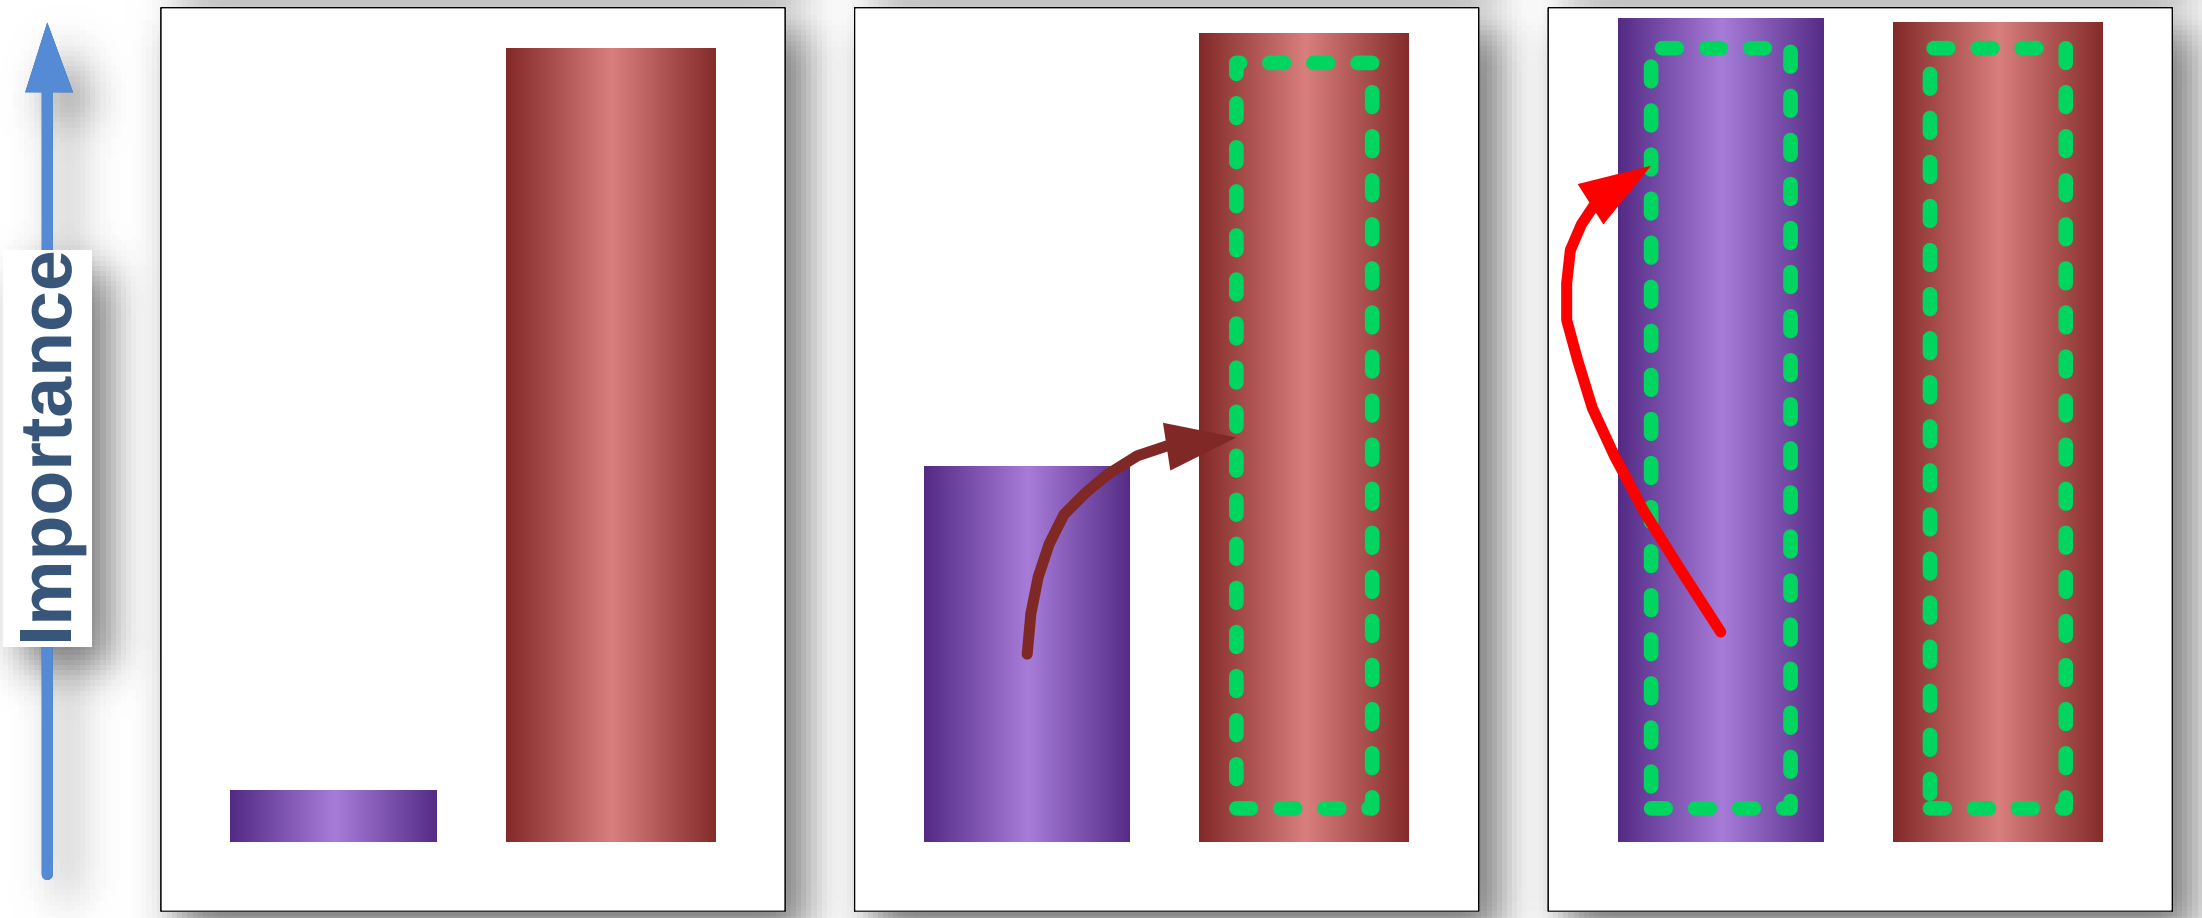
The era of

the Transformation of Operations

(Now!)

The era of

the Transformation of Transformation



How an Enterprise **effects** **Transformation** has become

a **Strategic Strength**

where massive business opportunities can be gained,

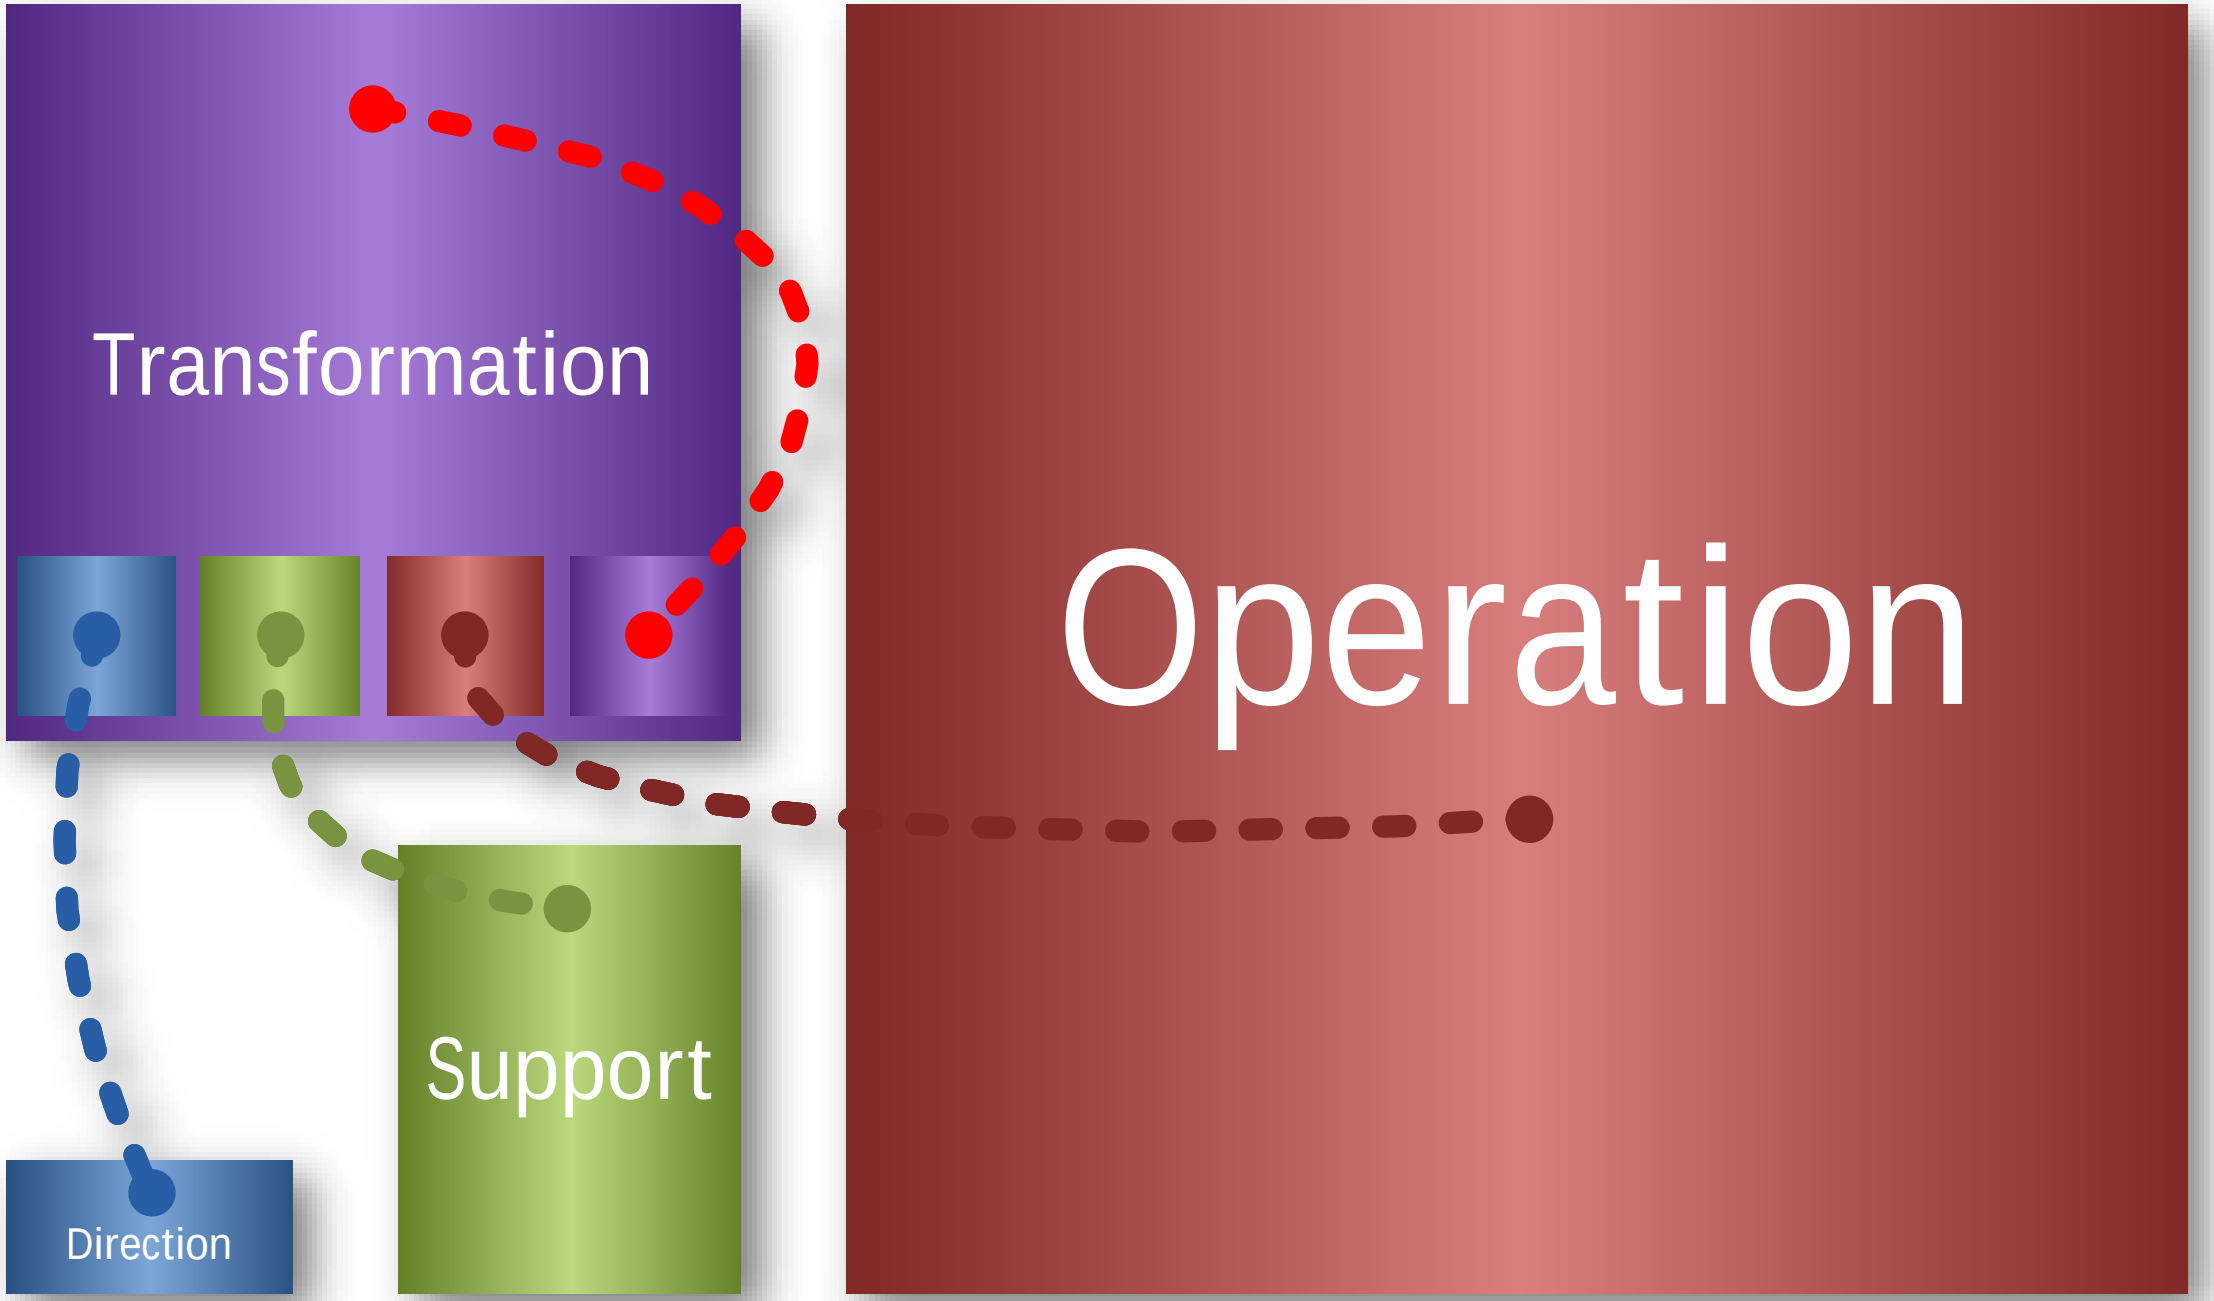
or a **Strategic Weakness**

where massive business problems will result.

When people and organizations
focus primarily on the quality
of their **Transformation efforts**,
quality tends to rise, and **costs fall**.

When people and organizations
focus primarily on the costs
of their **Transformation efforts**,
costs tend to rise, and **quality falls**.

© Pragmatic EA Ltd (2008-2017)



Transformation
Operation
Support
Direction

POET allows Executive Management to take a coherent and holistic view of **the whole of the Transformation part of their Enterprise**, allowing them to pragmatically increase its maturity, and thereby increasing its Effectiveness and Efficiency,

by providing a coherent and holistic framework (**Methods**, **Artefacts**, **Culture** and **Environment**) to enable informed decision making about what to change and how.

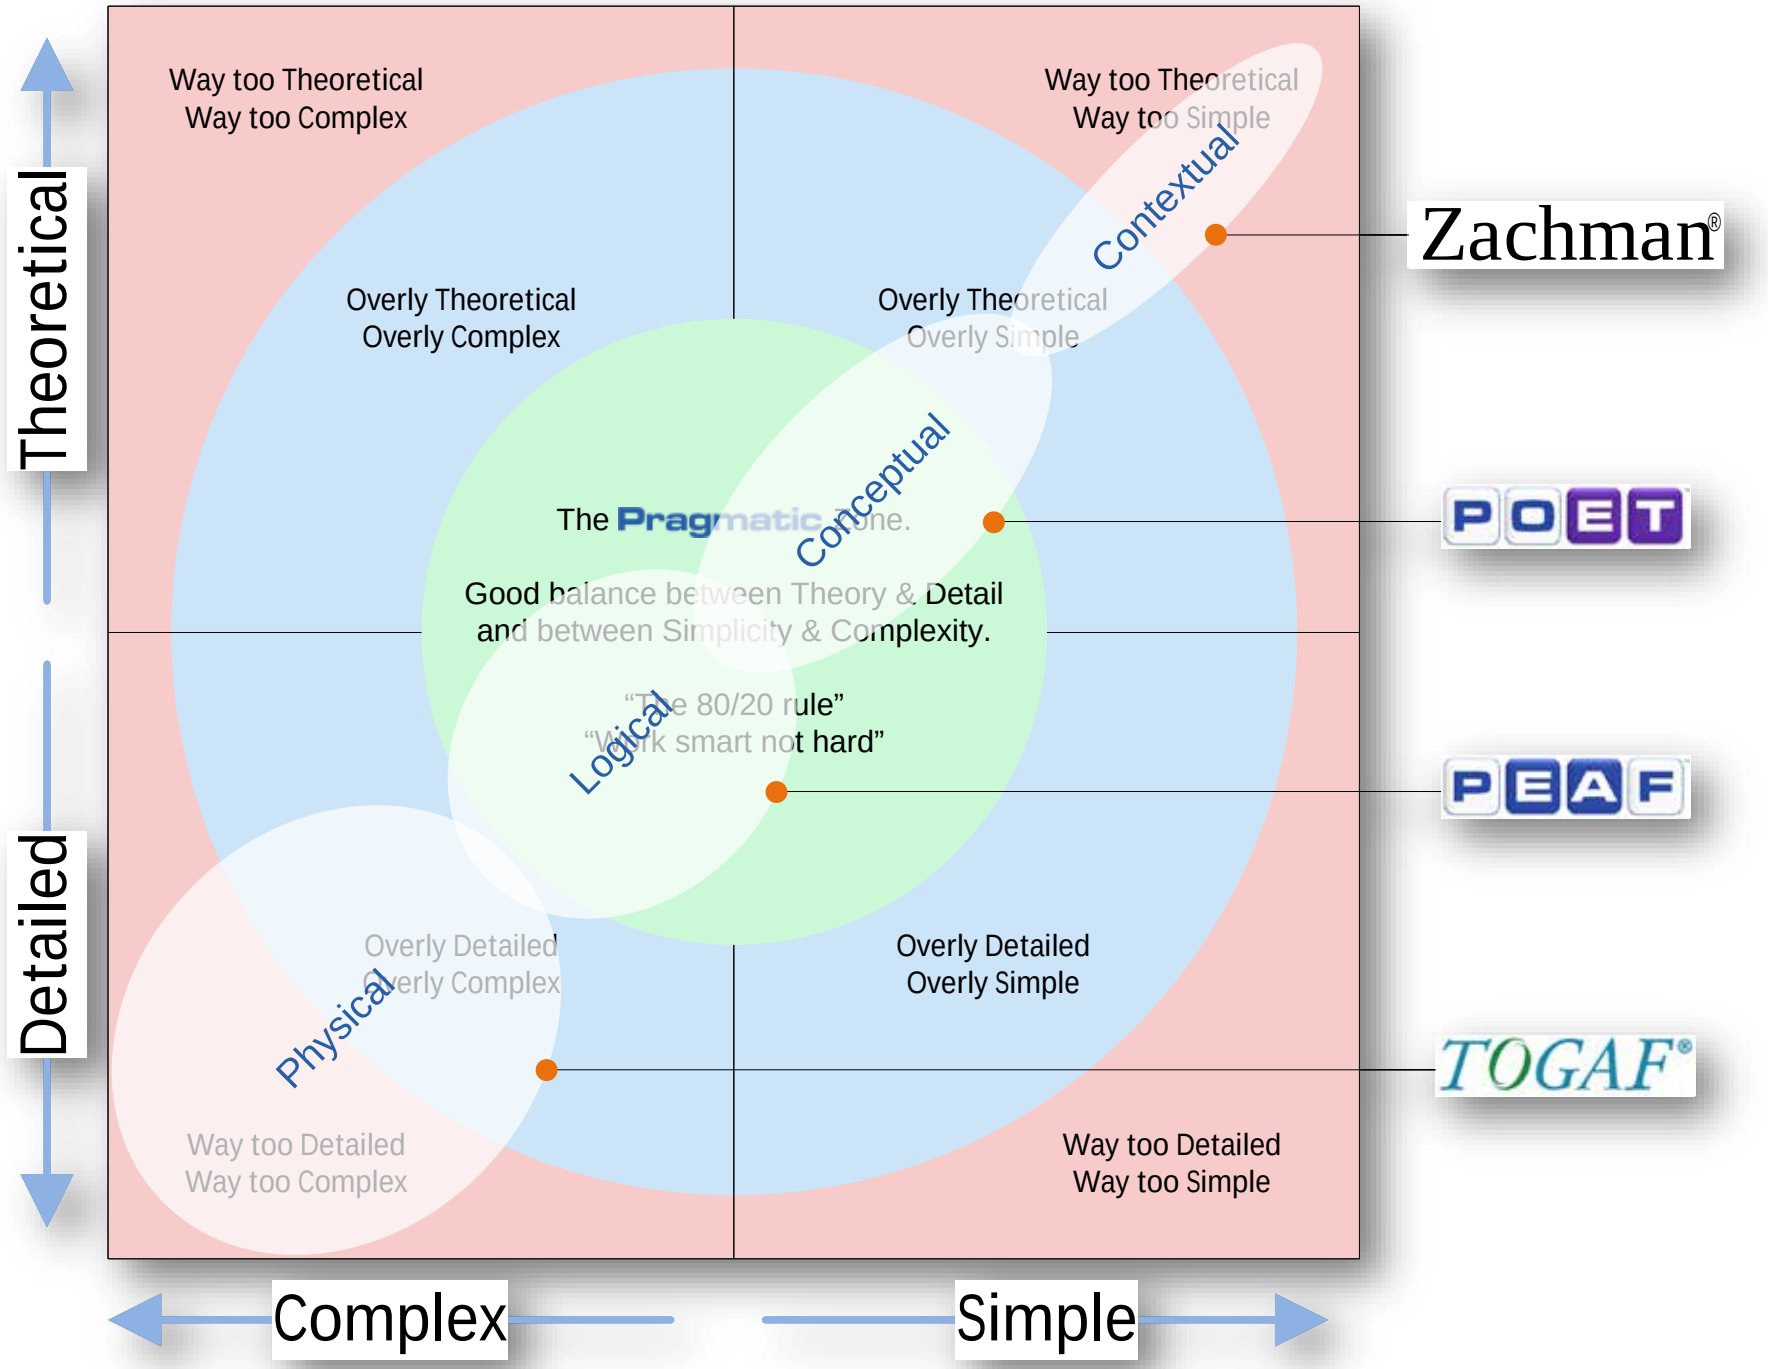
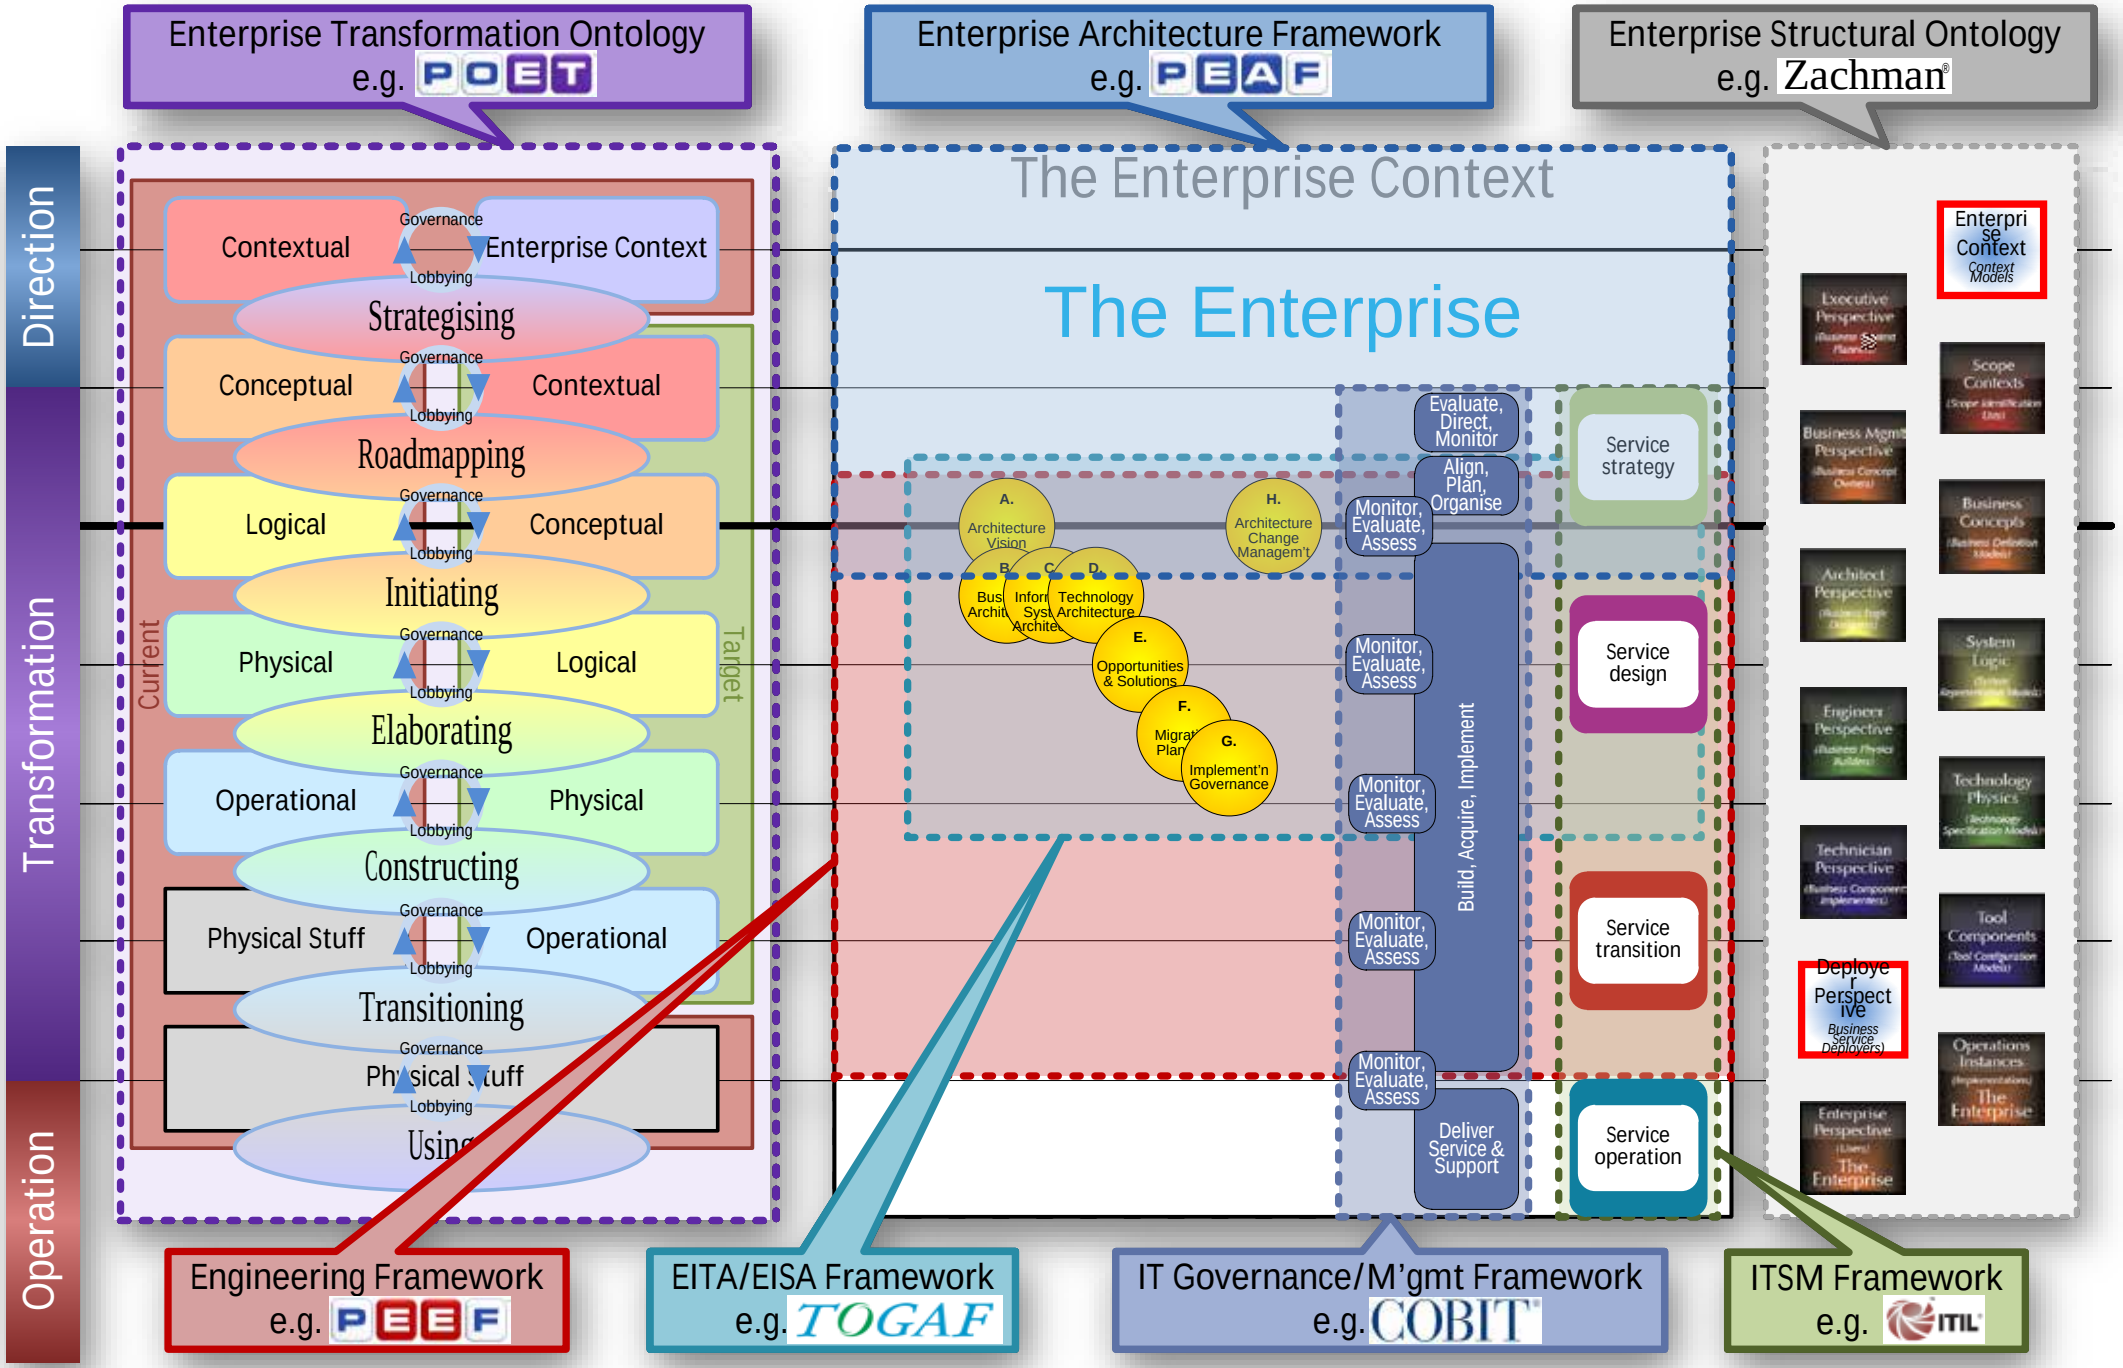
Where POET and PEAF Fit > Theory & Complexity



Context

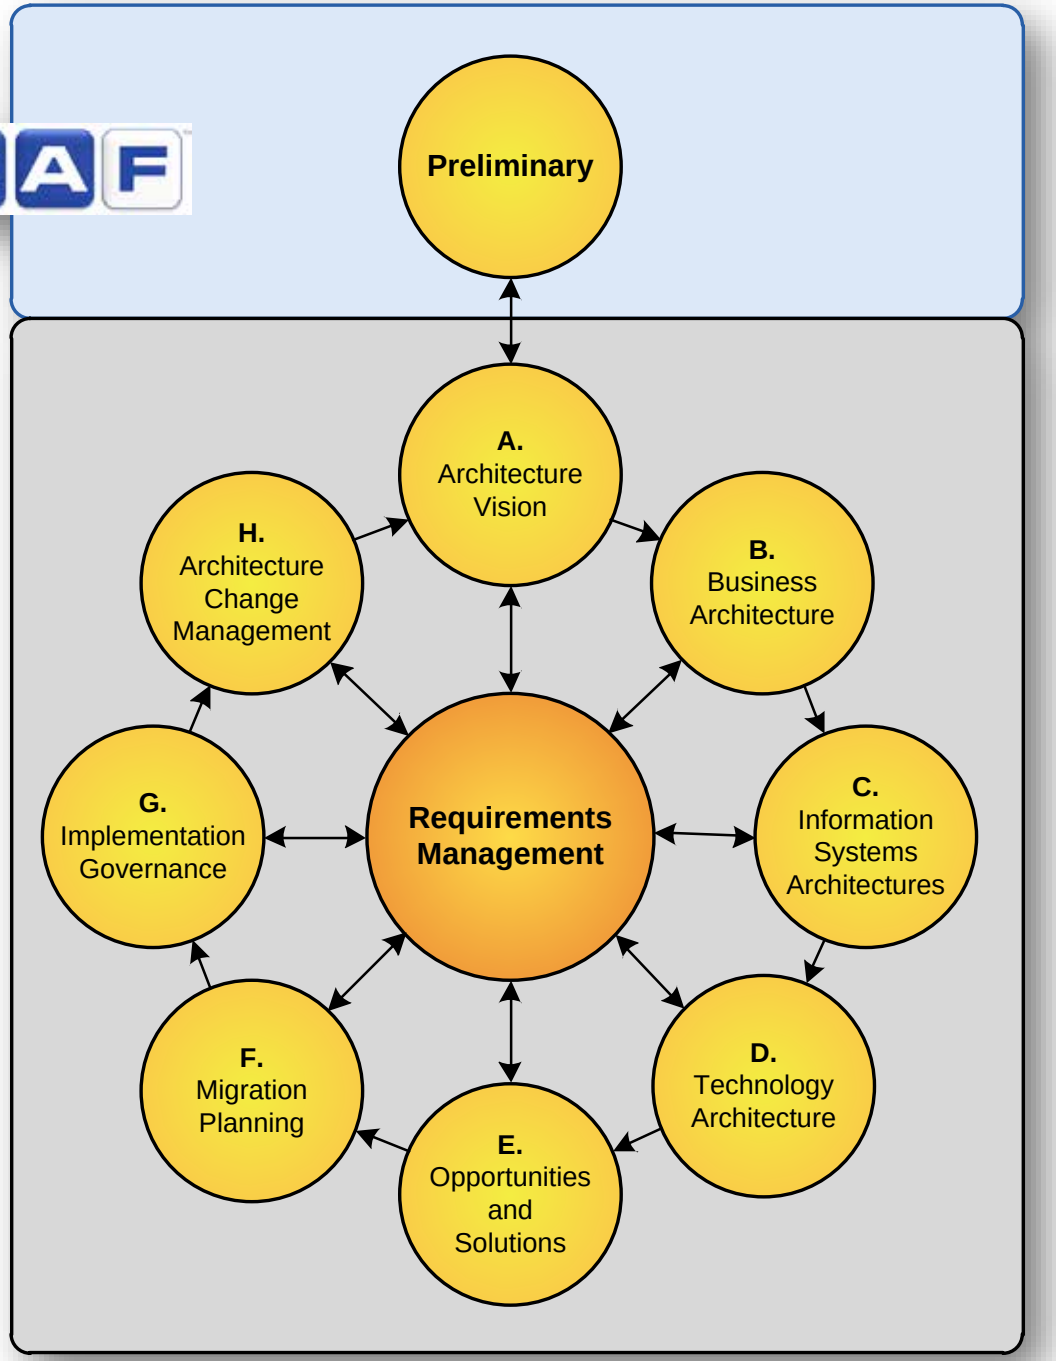
Where POET and PEAF Fit > Zachman, TOGAF, ITIL, COBIT, PEAF



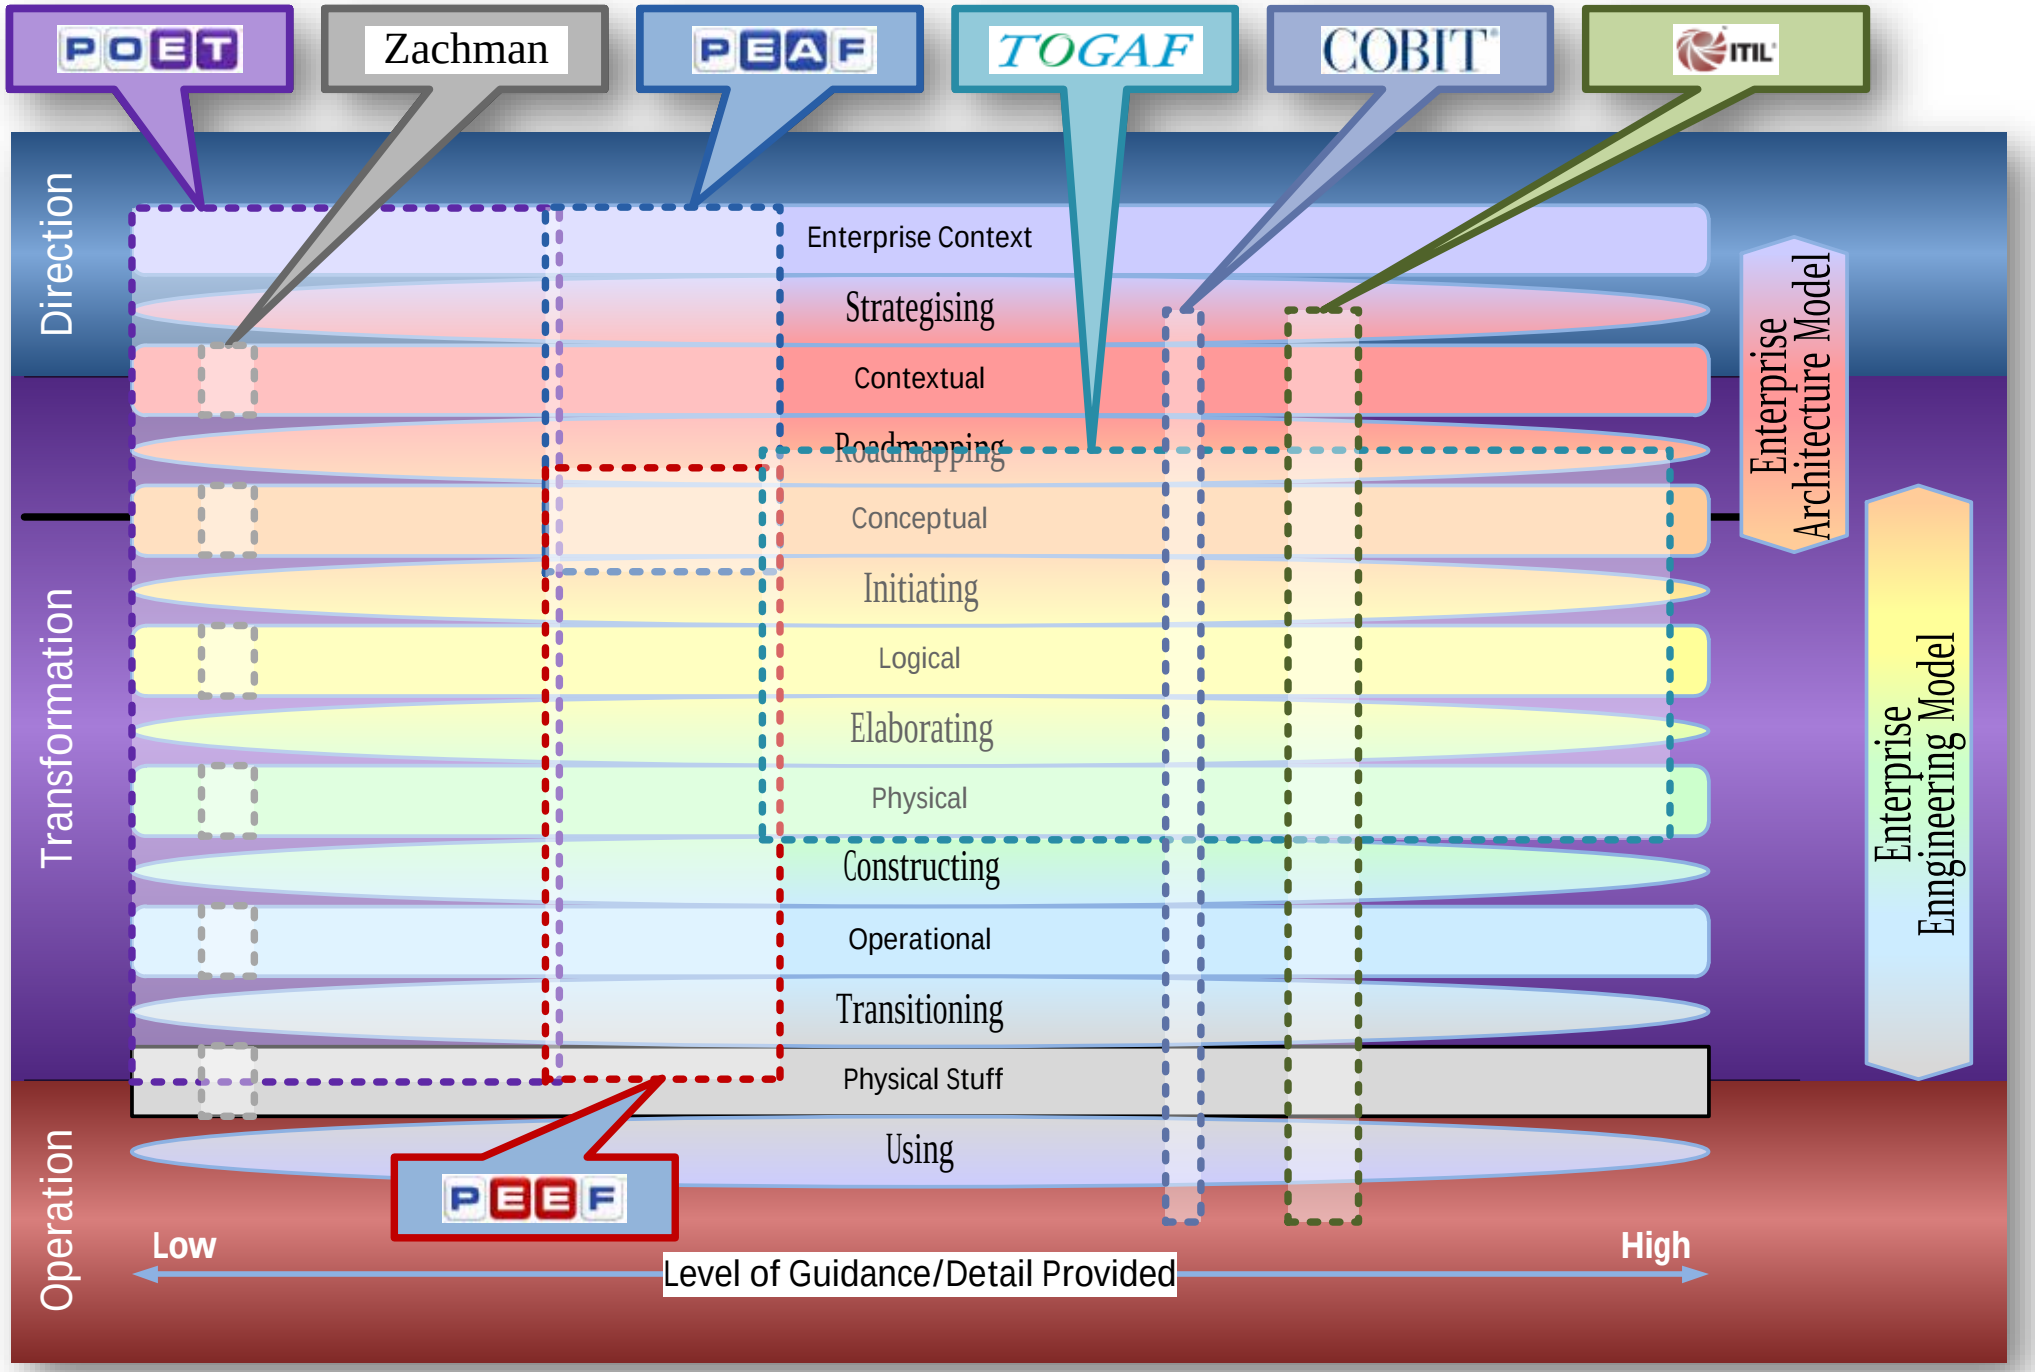
© Pragmatic EA Ltd (2008-2017)

"PEAF is an EA bootstrap"

- Chris Forde
General Manager Asia Pacific & VP Enterprise Architecture
The Open Group



Where POET and PEAF Fit > Level of Guidance / Detail



If you want to transform a complex Enterprise in a volatile environment...

You have to:

- **Model (not draw) the Enterprise.**
- **Persist Models as Primitives.**

You should also:

- **Use Ontologies appropriately.**
- **Use Architecture & Engineering appropriately.**

© Pragmatic EA Ltd (2008-2017)

Strategising

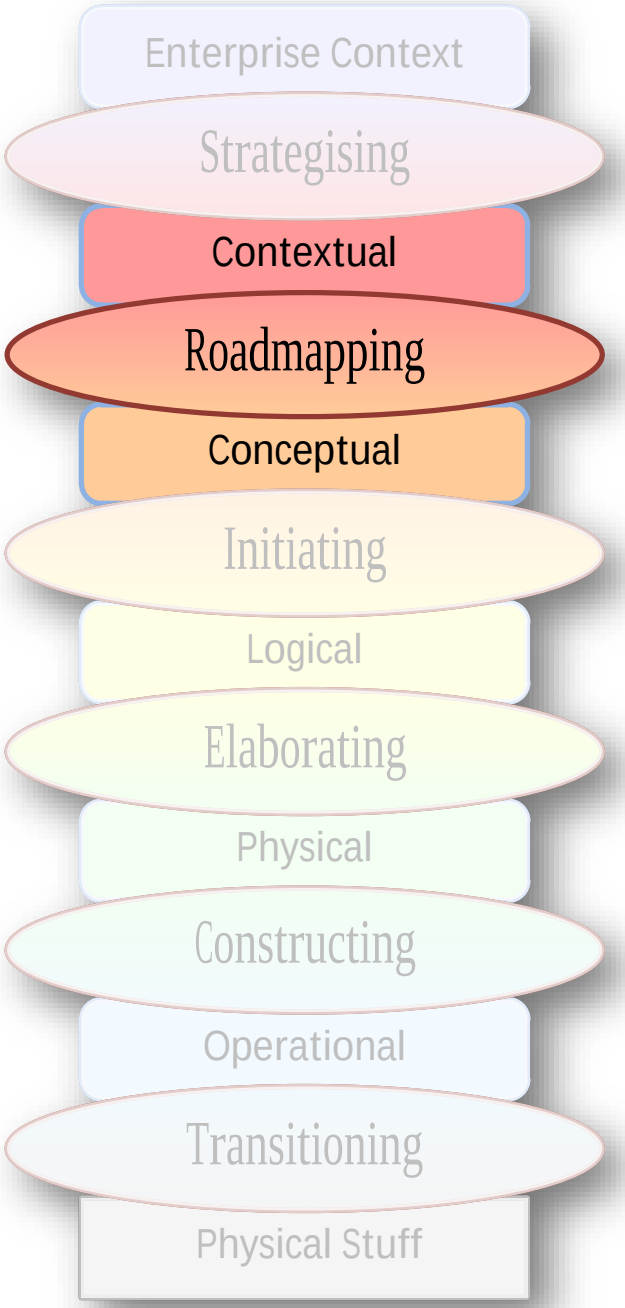
Sometimes called Business Strategy or Enterprise Strategy

e.g. Mission, Vision, Strategies, Tactics, Goals and Objectives

© Pragmatic EA Ltd (2008-2017)

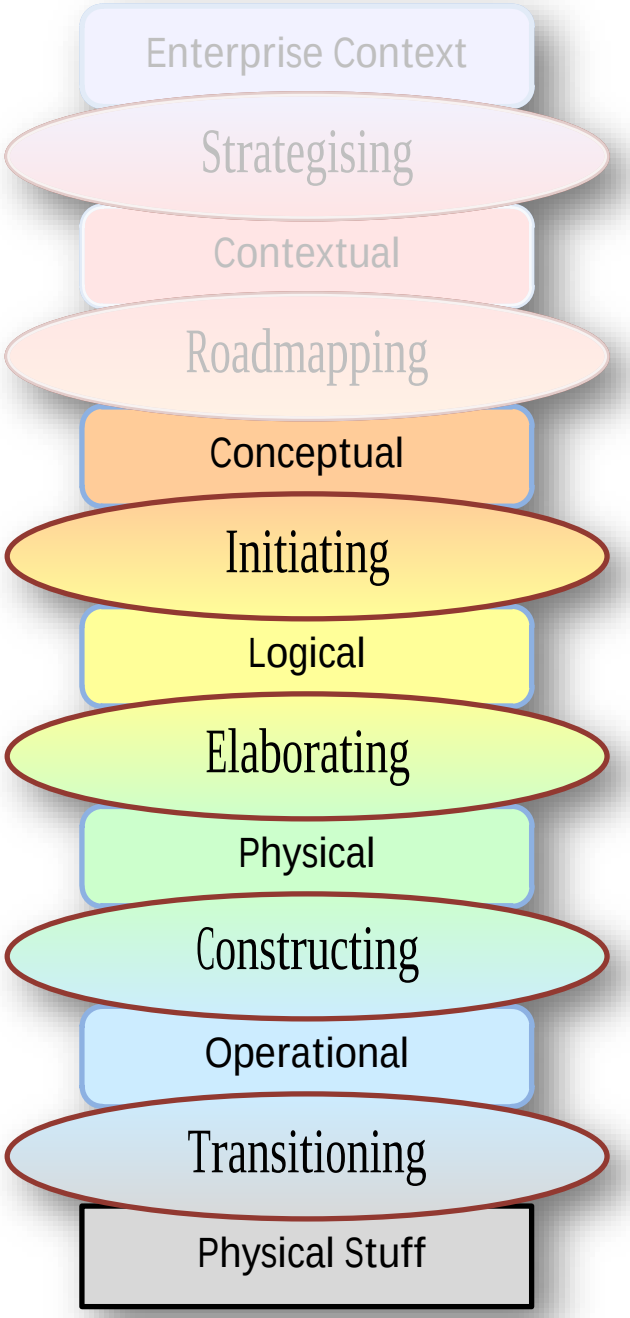


Roadmapping

Sometimes called Annual Business Planning or Transition Planning

Creates a portfolio of projects and roadmaps to be initiated over the coming year(s)

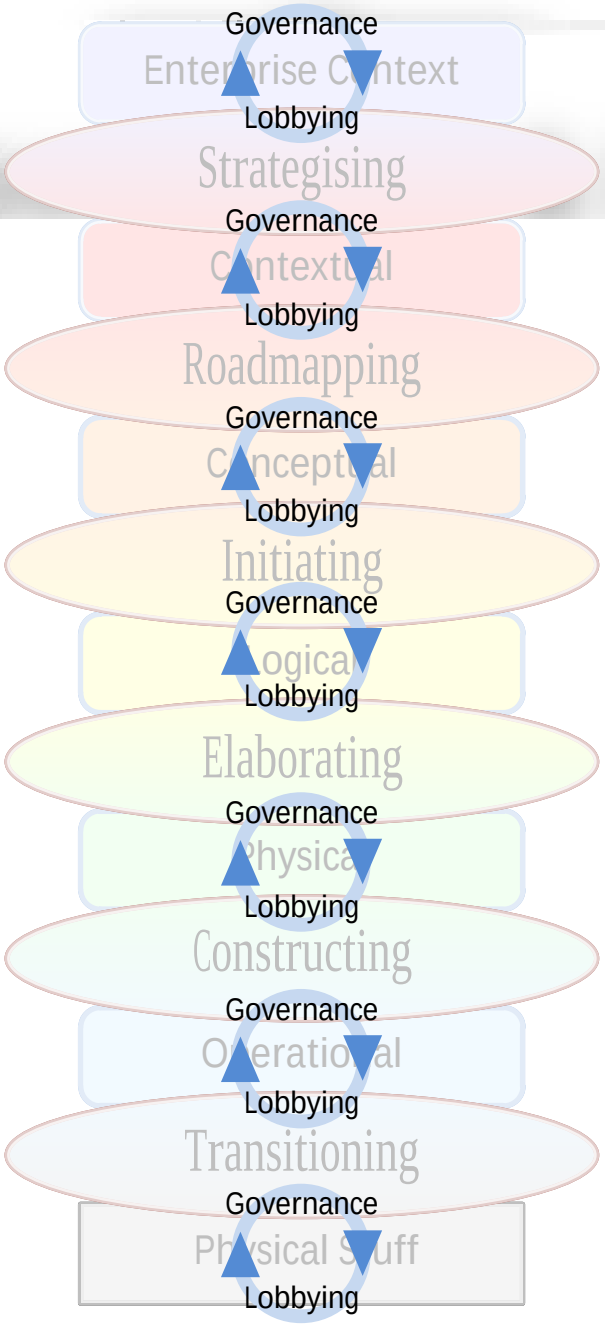
© Pragmatic EA Ltd (2008-2017)



Project Execution

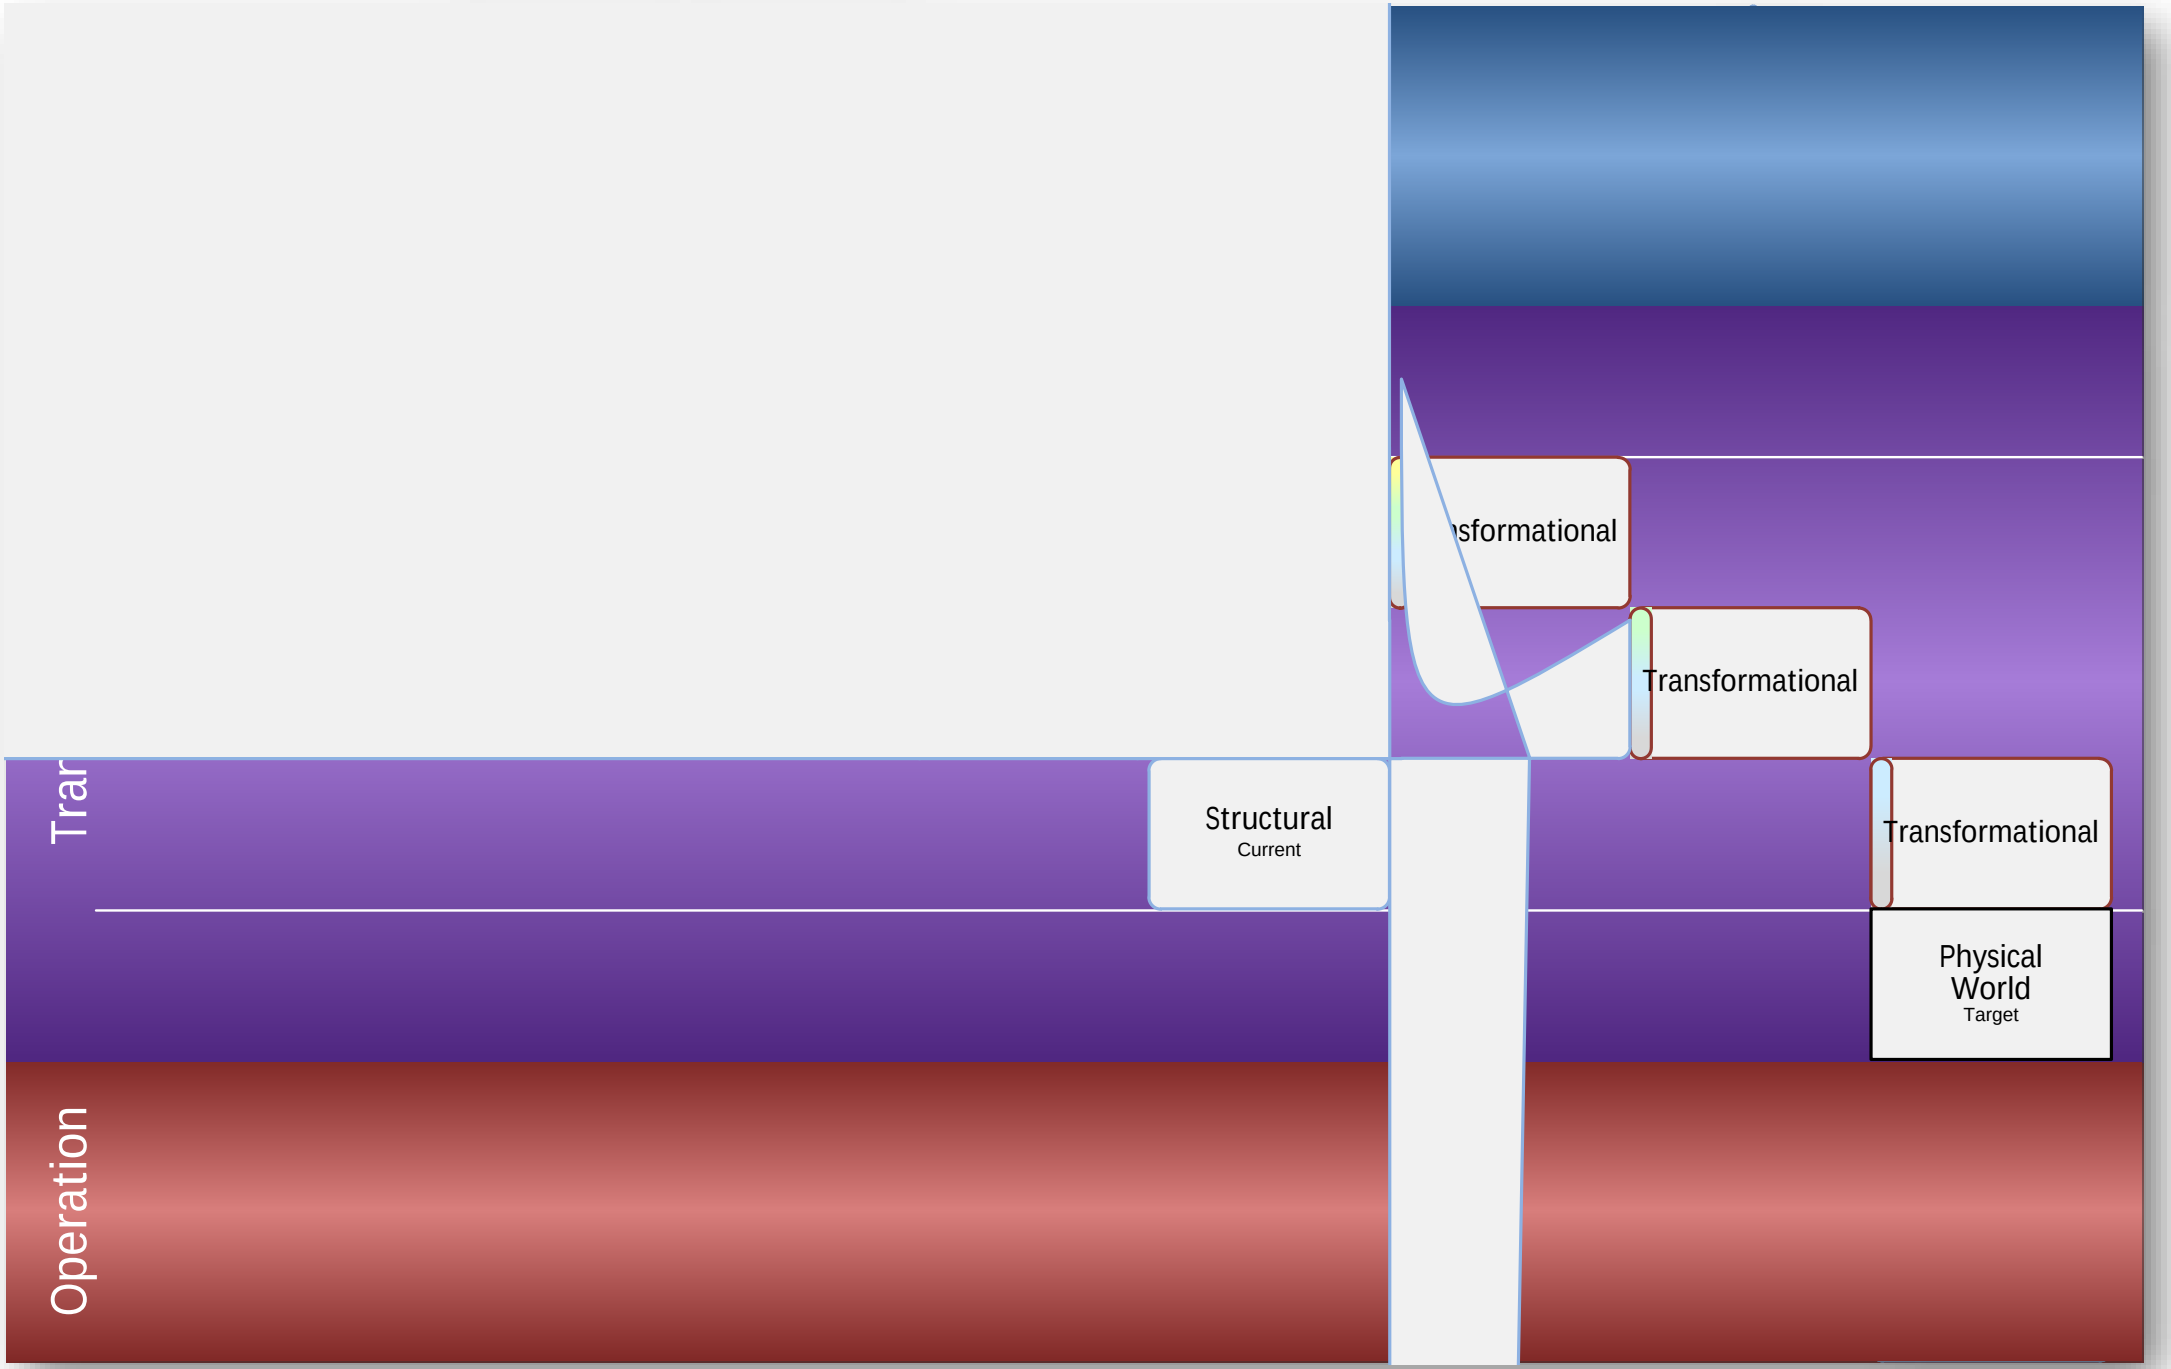
All the work that happens when the project portfolio executes which finally results in the deployment of changes to the Methods, Artefacts, Culture and Environment of the Enterprise.

© Pragmatic EA Ltd (2008-2017)



Governance & Lobbying

The work that happens between the phases, ensuring compliance looking down (Governance) and raising issues and problems looking up (Lobbying)



© Pragmatic EA Ltd (2008-2017)

Risk Management

"Do I write a cheap and nasty solution in order to move forward now? Or do I take more time to solve the problem properly and risk delivering less business value in the short term but possibly better business value in the long term?"

- *Ward Cunningham*

"The secret of business is to know something that nobody else knows."

- Aristotle Onassis

"Impossible is just a big word thrown around by small men who find it easier to live in the world they've been given than to explore the power they have to change it. Impossible is not a fact. It's an opinion. Impossible is not a declaration. It's a dare. Impossible is potential. Impossible is temporary. Impossible is nothing."

- Muhammad Ali
Boxer

"It always seems impossible until its done."

- Nelson Mandela
Revolutionary / Politician

"To believe a thing impossible is to make it so."

- French Proverb

"Everything is theoretically impossible, until it is done."

- Robert A. Heinlein
Science Fiction Writer

"We would accomplish many more things if we did not think of them as impossible."

- Vince Lombardi
American Football Player

"Never tell a young person that anything cannot be done. God may have been waiting centuries for someone ignorant enough of the impossible to do that very thing."

- G. M. Trevelyan
Historian

"Every noble work is at first impossible."

- Thomas Carlyle
Philosopher

"So many of our dreams at first seem impossible, then they seem improbable, and then, when we summon the will, they soon become inevitable."

- Christopher Reeve
Actor / Activist

Bad times

We feel the pain but,

we don't have the resources to mature Transformation.

Good times

We have the resources to mature Transformation but,

we don't feel the pain.

Martin Brundle commenting on how the strategy and planning of F1 is a mess...

"The system is broken and it needs changing, but to make changes you've got to get through the broken system, so it's spinning its wheels and going absolutely nowhere.

It's going to take a big bang to change it because between them they couldn't run a bath to be honest, and there's no way that they'll find a way and have a common sense pill and get on with it. So, until there's a big bang (and then you've got to be concerned about what fills the vacuum) that's when it will move forward and I don't know when that will be."

Phases

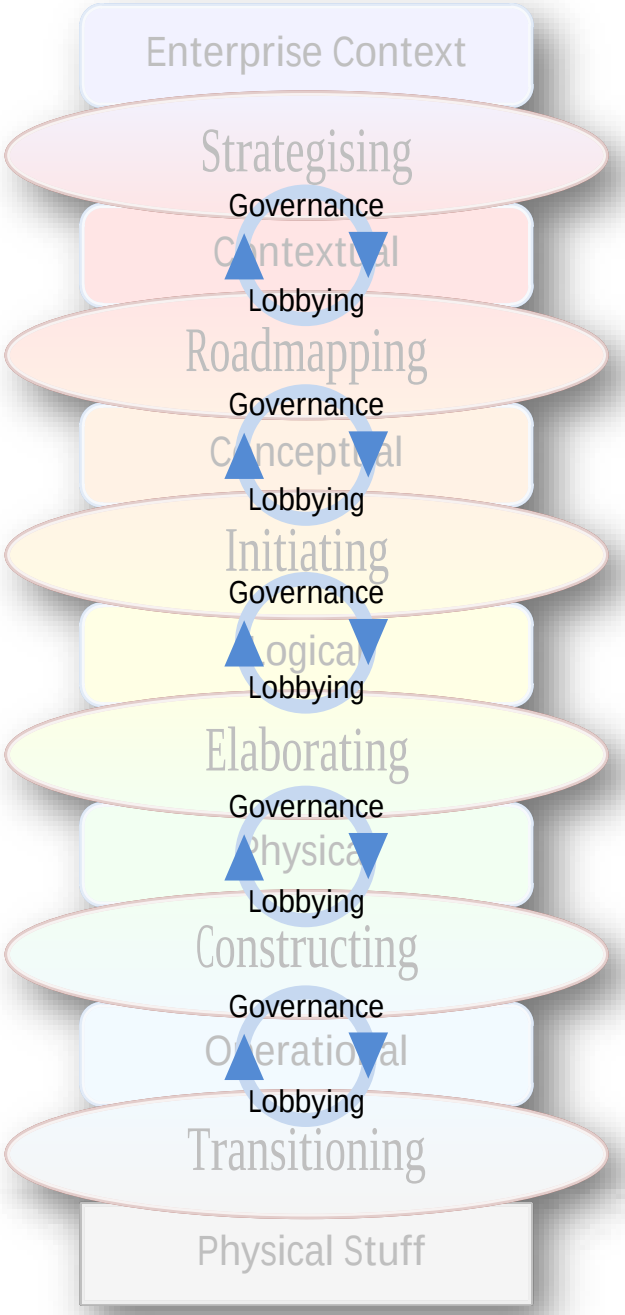
Problem:

There are problems in how the Transformational processes of the different Phases relate to each other and work together, which means the desired output at the bottom becomes disconnected from the intent at the top.

Opportunity:

If we can put in place things to make the whole more coherent we will be able to optimise the whole (at the possible expense of some of the parts) rather than optimising the parts at the expense of the whole.

 © Pragmatic EA Ltd (2008-2017)



Governance & Lobbying

Problem:

Governance tends to be a tick (or bury) the box exercise and Lobbying does not expose opportunities or issues to the correct level.

Opportunity:

If we can expose where misalignment is happening at the time it is happening, we would be better able enable realignment where appropriate and to reduce the cost and pain of doing so.

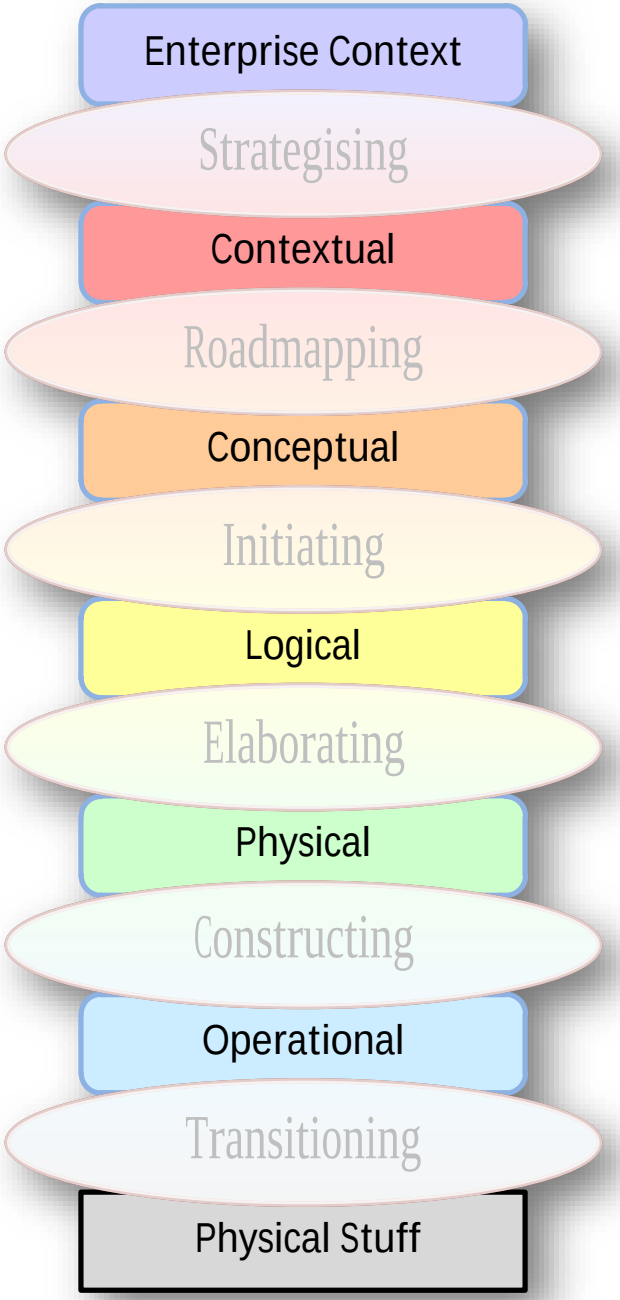
 © Pragmatic EA Ltd (2008-2017)

Not clear

Not documented

No clear ownership

Serious knock-on problems



Artefacts

Problem:

There are problems in how the Structural and Transformational artefacts of the different Phases relate to each other and work together, which means the desired output at the bottom becomes disconnected from the intent at the top.

Opportunity:

If we can put in place things to make the whole more coherent, traceability and impact assessment will become much easier.
